

**ABSTRACT OF THE DISCLOSURE**

5 A tissue paper supporting assembly includes a panel that has a rear  
edge, a forward edge and a pair of lateral side edges. Each of pair of legs  
has a lower end that is attached to and extends upwardly from the rear  
edge. The legs are spaced from each other such that each of the legs is  
positioned adjacent to one of the side edges. The legs are each positioned  
in a plane orientated substantially perpendicular to a plane of the panel. A  
10 bracket is attached to the legs and extends over the panel such that a plane  
of the bracket is orientated substantially parallel to the plain of the panel.  
A coupler is attached to an upper end of the legs for selectively coupling  
the legs to a vertical surface. A tissue holding box may be removably  
positioned on the panel and held against the legs by the bracket.
